NOTES

1) Walk times are intended to estimate the distance that can be traveled while walking away from the origin.

2) Walk times are only approximate and may be subject to computational errors. They should not be considered a guarantee as to the total distance that can be traveled.

3) The analysis assumes a pedestrian is walking on the road or pathways with no additional factors impacting travel, such as having to find a crosswalk to cross a street.

4) A walking speed of 1.38 meters per second is used in the analysis.
